3.75 ( a )

**HOUSING FACILITIES, GENERAL.**

Housing facilities for primates must be designed and constructed to be structurally sound for species contained within. They must be kept in good repair and protect animals from contamination.

Building 10-B is a two story structure housing chimps on both floors. There is a crack in floor-wall junction of second story. This allows effluent to leak down along wall of lower (first story) structure. This wall is separated from chimps by a 3 foot wide corridor. Although this leak does not seem to allow effluent contact with chimps the potential is present and repair is necessary.

Correct by 5-15-04

3.80 ( b ) ( 2 ) ( i )

**PRIMARY ENCLOSURES.**

The minimum space that must be provided to each non-human primate , whether individually or group housed , will be determined by the typical weight of animals of its species.

28 adult chimps housed in various groups in room 100. Cages have 43 square feet of floor space and are non-compliant if 2 or more chimps housed in enclosure.

Room 103- 2 chimps housed in 10 sq foot baboon cage which obviously does not meet space requirements.

Room 200- 31 adult chimps housed in various sized enclosures. Floor space adequate but vertical space is 83 instead of 84 inches.

Correct these non-compliances by 3-25-05.

This inspection was conducted by Dr. Sylvia Taylor and myself from 3-23/25-2004 as a result of Complaint # 85. [Redacted]

assisted in this inspection.
